## 新しく追加されたAFF-C400ノードでOKMのセットアップが失敗する

[https://kb-ja.netapp.com/on-prem/ontap/Ontap\\_OS/OS-KBs/OKM\\_setup\\_is\\_failing\\_on\\_a\\_newly\\_added...](https://kb-ja.netapp.com/on-prem/ontap/Ontap_OS/OS-KBs/OKM_setup_is_failing_on_a_newly_added...)

Updated: Tue, 05 May 2026 12:20:52 GMT

### 環境

- ONTAP 9
- AFF-C400
- C250/FAS2720

### 問題

- key-manager setupの実行がエラーで失敗します：

Error: command failed:

One or more self-encrypting drives are assigned an authentication key (AK) other than a default AK. Use the "storage encryption disk show" and "storage

encryption disk show -fips" commands to identify the devices that have authentication keys other than the manufacturer secure ID (MSID, denoted by keyID

'0x0') or a null keyID (denoted by no keyID entry). Consider using the (privilege: advanced) "storage encryption disk sanitize" command or, for drives with

FIPS AKs, the "storage encryption disk revert-to-original-state" command to reset the AKs and wipe data from these drives. For further assistance, contact

technical support.

- SEDディスクは正しい認証キーでロックされていますが、SEDディスクがない状態で新しいノードを追加しようとすると、システムからエラーが発生します。
